

Casper Havelykke Larsen

Web developer with agency experience in PHP and JavaScript, and TypeScript fullstack (React, Next.js, Node.js) from my own projects, built and shipped from scratch. I work AI-first with Claude Code, take ownership from idea to production, and finish what I start.

Shipped on my own: Pejling on the App Store, Røket on Google Play, and Loggen, a self-hosted Next.js app with an MCP server so an LLM works directly with my data.

EXPERIENCE

Brating, Kalundborg — Web Developer

May 2025 – Aug 2026

- Built the client's largest solution: an online [funeral planner](#) where a funeral is configured in 9 steps (ceremony, casket, urn, flowers, etc.) with a running total, something standard WooCommerce doesn't support.
- Solved it with WooCommerce Composite Products customized via PHP hooks plus my own PHP, JavaScript, CSS and HTML, and a sticky price box that updates live throughout the flow. In daily use on the client's site.
- Developed daily in PHP and JavaScript across WordPress and Shopify projects (e.g. the custom [product-filtering section on Gulvgiganten](#)), working independently in existing codebases with Git.

Freelance — Web Developer

Sep 2018 – May 2025

- Independent freelance work for clients across several industries, from single tasks and small tweaks to complete websites.
- [egulve.dk](#) (Shopify): built an m² price calculator for the flooring in JavaScript and Liquid.
- [regneregler.dk](#): rebuilt from an outdated codebase into WordPress with Elementor, reproducing the original design 1:1 via minor HTML and CSS adjustments.
- df3.dk (offline): built a complete WordPress site with Divi for a client's project in Glyngøre. Customized the theme and a gallery plugin with my own adjustments in CSS, HTML and JavaScript.

MOMO Graphic Design — Internship, Web Development

Sep – Nov 2020

TRG International, Ho Chi Minh City — Internship, Web Development

Jan – Mar 2019

SELECTED PROJECTS

Loggen — Self-hosted logging app, Next.js + MCP

Ongoing

- Next.js + TypeScript fullstack, self-hosted on my own server, in daily use.
- Built an MCP server on top so an LLM (Claude) can read and write the data in natural language. Code on [GitHub](#).

Røket — Mobile app, live on Google Play

Ongoing

- An app against loneliness: users create spontaneous activities nearby, others in the area get a push and can join. Designed, built and shipped end-to-end, live on Google Play.
- React Native + TypeScript for iOS and Android; Firebase as backend with Auth, Firestore realtime data, storage, push and scheduled functions. Code on [GitHub](#).

Pejling — iOS app, live on the App Store

2026

- Alcohol-awareness app: log drinks with one tap and get a live estimate of alcohol in the body over time, based on weight and sex, plus history and reminders.
- Privacy-first by design: no account, no tracking, no ads, all data stays on the device. Designed, built and shipped through App Store review on my own.

EDUCATION

Zealand Roskilde

Bachelor's Degree, Web Development

Sep 2019 – Jan 2021

- Web PHP (12): server- and client-side development
- Database (12): SQL, data modeling and architecture
- Bachelor project (10): fullstack social platform, React + TypeScript + GraphQL

Zealand Slagelse

Vocational Degree, Multimedia Design

Sep 2017 – Jun 2019

- Final project: 10
- Elective: Backend development
